

Free* Oracle Training: Learn to Teach Java.

Are you a secondary school or community college educator looking for a way to enhance your computer science curriculum? The Oracle Academy is offering free professional development and curriculum that will enable you to teach your students object-oriented programming using Java, one of the world's top programming languages used by more than 9 million developers.

Train to Teach a Semester: Java Fundamentals

This course engages students with little or no programming experience to create Java programs. Participants are introduced to object-oriented programming concepts, terminology, and syntax, and the steps required to create basic Java programs using the Alice, Greenfoot and Eclipse interactive development environments. Hand-on practices figure prominently throughout this course so students can experience firsthand the power of computer programming.

- No previous programming experience is required.
- Highly structured curriculum integrates easily into your computer science program.

Enroll today for “Java Fundamentals” and be among the first teachers in the world to experience our new Java training.

* Oracle Academy training is a Membership benefit. Membership to the Oracle Academy Introduction to Computer Science is free. Visit www.oracle.com/academy to register for an account.
